How should a core drill rig be bolted down?

1. The core drill rig must be bolted down 100% firmly- even a .5mm vibration typically where anchored to an uneven floor/wall can result in damage to both the core bit and the machine. Ensure all is tightened securely - see page 5
2. The drill speed (R.P.M.) should be correctly chosen for the diameter of the core bit.

How do I choose a core drill machine?

When choosing a core drill machine there are two main factors to consider, firstly what are the largest diameter holes typically required and is hand held drilling a requirement. Diamond core drill machines are rated for the largest core they can cut either as hand held or mounted on a core drill stand (rig).
