

Diesel air compressor sandblasting operation

Can you use a sandblaster with an air compressor?

Sandblasting, also known as abrasive blasting, is one of the most popular applications for an air compressor. Sandblasting using an air compressor is a nice thing and it makes the job even simpler. If you want to buy a new sandblaster you can also see Best Sandblaster for cars.

How much air compressor do I need for sandblasting?

For a small sandblasting work that uses #2 nozzle (1/8"), you need an air compressor that can deliver 20 CFM @100 PSI. Bigger jobs with #4 nozzle (1/4") require 80 CFM @100 PSI and heavy-duty jobs that utilize #6 nozzle or more need 175 CFM and above at 90 PSI.

What are the air requirements for sandblasting?

When considering the air requirements for your sandblasting setup, there are several key factors to take into account. Maximum nozzle orifice size and number of blast hoses running simultaneously: The size of the nozzle orifice and the number of blast hoses in use will directly impact the air volume required.

What happens if you don't have enough air for sandblasting?

Failing to provide adequate air supply can lead to frustrating issues, such as frequent pressure drops and interruptions in the blasting process. When considering the air requirements for your sandblasting setup, there are several key factors to take into account.

What are the critical decision points in sandblasting?

Let's explore the critical decision points. Determining the appropriate air volume and pressure is a crucial first step in ensuring the success and efficiency of a sandblasting operation. Sandblasting is a process that requires substantial airflow to effectively propel the abrasive media through the hoses, nozzles, and onto the work surfaces.

How do nozzle size and number of blast hoses affect airflow?

Maximum nozzle orifice size and number of blast hoses running simultaneously: The size of the nozzle orifice and the number of blast hoses in use will directly impact the air volume required. Larger nozzles and multiple hoses will demand a higher airflow to maintain the necessary blast pressure.

CF390M-10.5 is equipped with a Cummins engine, with an air flow of 390cfm (cubic feet per minute) and an exhaust pressure of 10.5bar, which can easily drive large sandblasting ...
