

Disassembly and assembly of the solenoid valve of the screw air compressor

What is a compressor assembly?

The compressor assembly is a positive displacement, oil flooded lubricated, helical rotary screw type unit employing a single stage of compression. The components include housing or stator, two rotors or screws, bearings and bearing supports. In operation two helical grooved rotors mesh to compress air.

What happens when a solenoid valve exceeds 110 psig?

When it exceeds 110 psig (7.6 bar), the microprocessor control system de-energizes the solenoid valve allowing sump air pressure to be supplied directly to close the inlet valve. Simultaneously, the solenoid valve sends a pneumatic signal to the blowdown valve.

How do you remove a moisture separator from a air compressor?

Isolate the compressor from the system and fully discharge the compressed air within the compressor. Remove the tube from the fitting located on the bottom of the moisture separator. Remove the bowl of the moisture trap, clean and replace. Unlatch the starter box panel and open the intake panel.

What are the components of screw air compressor?

Screw air compressor is the main components of screw head, the separation of oil and gas cylinder. Screw suction filter through the nose and suction inlet control valve, oil also inject compressed room, a cooling of the nose, while the screw and the bearings lubricated by compressed air pressure that is generated.

How do you change a compressor separator?

compressor. Separator Change: (34-40050-419) (Prior to 8/98 install kit K34-40050-449) Pull pressure line off one of the separator taps. Spin off separator (strap wrench required). Oil new gasket and spin on new sep

What is the procedure for removing oil filter from a compressor?

The procedure is as follows: Stop the compressor unit. Discharge service valves. Using appropriate equipment, lower the compressor pressure to 0 psig. Open the drain valve(s) and drain oil into a suitable container. Drain the oil filter(s) and the oil coolers. Remove the old filter cartridges, and install new ones. Remove, clean, and reinstall
