What is down-the-hole hammer drilling?

In addition to its use in mining, construction, geothermal exploration, and water well drilling, down-the-hole hammer drilling is also employed in the oil and gas industry for wellbore drilling. This method allows for faster and more efficient drilling through hard rock formations, reducing overall project timelines and costs.

What is a down the hole hammer?

Down-the-Hole refers to where the hammer action occurs when compared to drifter hammers, which hammer on top of the drill string. The DTH hammer piston always makes direct contact with the drill bit and there is generally no loss of transmitted energy as the hammer drills deeper, as is the case with drifter (top hammer) rigs.

How big is a down the hole hammer?

The Down the Hole hammers range varies from 2.5 to 12 inches diameter. The Down the Hole over burden drilling systems ranges from 4 3/4-12 inches diameter. DTH Products are field tested to stringent quality requirements to provide consistent performance results in the field.

Which DTH hammers are best for drilling rigs?

Thus, smaller compressors rated less than 1,000 SCFM that are common on many drill rigs, may now be utilized with the A Series DTH hammers to reach the hammers' peak performance. Rockmore's T Series hammer class is a breakthrough in DTH drilling technology for mining, construction, and water-well applications.

What is a down the hole over burden drilling system?

The Down the Hole over burden drilling systems ranges from 4 3/4-12 inches diameter. DTH Products are field tested to stringent quality requirements to provide consistent performance results in the field. We use a combination of premium steel, quality carbide and state of the art design and manufacturing to yield superior drilling products

How does a hammer drill work?

Compressed Air Delivery: The drill pipe acts as the conduit, providing compressed air for powering the hammer, as well as providing the necessary rotation. Impact Mechanism: The piston inside the hammer strikes the drill bit repeatedly, delivering high-impact energy to break through rock.

In down-the-hole drilling a drill rod is fitted with a hammer at its lower end. The hammer, which is mounted on the drill bit, is activated through the addition of ...

Drill pipes are then used and added to reach the required depth of a hole. The drill pipe, hammer and drill bit
