

How does a down-the-hole drill work?

Down-the-hole drilling is to drive the hammer behind the drill bit by compressed air by means of the drill pipe. The piston strikes a little bit straight, while the hammer external cylinder provides direct as well as steady guidance of the drill a little bit.

How reliable is DTH drilling?

Very reliable in hard rock boring (contrasted to the rotating drilling). The percussive pressure of the top hammer drilling produced by the piston of the pump in the hydraulic drilling gear is transmitted to the drill bit via shank adaptor and drill pipe, This is the distinction between DTH drilling.

How do I choose a good hammer drill?

As it is, it's already a pretty badass little drill. Torque Test channel is testing drills now but they haven't covered every model. To narrow down the best of the best, start with the chuck. If metal, proceed. If plastic, throw that model out. Next, look at features such as speeds, hammer mode, etc.
