The numbing sensation will take effect almost immediately. Step 3: Place a dental dam, which is a small rubber sheet, over the affected tooth to protect and isolate the area. This will keep the tooth clean and dry during the procedure. 2 The root canal treatment itself will typically take about 90 minutes.

How do you treat a tooth that dreads a root canal?

Treat it the same as the rest of your teeth, as it can still develop decay or gum disease if not given proper care. Brush twice a day with a fluoride toothpaste, floss at least once per day, and make sure to attend regular exams and cleanings as prescribed by your dentist. It used to be common for patients to dread receiving a root canal treatment.
