How does down-the-hole drilling work?

Down-the-hole (DTH) drilling uses a hammer at the end of a drill string. This hammer crushes rock through rotation, air, and bit loading. As the drill string rotates slowly, the hammer repeatedly strikes the rock. Compressed air drives a piston within the hammer, creating a powerful striking force.

What is a DTH drill rig?

A down-the-hole drill, usually called DTH Drilling Rig, is basically a mini jackhammer screwed on the bottom of a drill string. The speedy hammer activity breaks hard stone into little flakes and dust and can be dismissed evident by the air exhaust in the DTH hammer.

What is down-the-hole (DTH) drilling?

Down-the-hole (DTH) drilling has made it easier for contractors to drill wells faster and more efficiently, and to transition from dirt boring to rock boring just by adding a compressor and hammer to the drill bit.

What is a down-the-hole drill?

A down-the-hole drill, usually called DTH, is basically a mini jackhammer screwed on the bottom of a drill string.

How do drill rigs work?

Conventional drilling rigs use the power of an electric motor or a diesel engine, which is transmitted to the turntable through the operating system to drive the drill bit connected to the drill rod to grind and cut the rock to achieve the purpose of drilling. This kind of drill first solves the ground power.

What is the difference between a borewell and a down-the-hole drill?

Borewells, on the other hand, tap into underground water that is naturally filtered through soil and rock layers, resulting in cleaner and safer water. Down-the-hole (DTH) drilling uses a hammer at the end of a drill string. This hammer crushes rock through rotation, air, and bit loading.
