

Fire Demolition Rock Drill

How do you use a rock drill?

Drill through granite or hard-faced rock, or complete quarry drilling or secondary holes for blasting with our pneumatic rock drills. Rock drills are tough, versatile and dependable. They are lightweight tools for drilling holes for anchor bolts and small dowel hole drilling.

What is a rock drill used for?

Rock drills are tough, versatile and dependable. They are lightweight tools for drilling holes for anchor bolts and small dowel hole drilling. This rock drill is between 50-59 lbs., with ergonomic single-lever throttle controls for easy use. It can deliver up to 2,100 blows per minute (bpm) to get through the toughest materials.

Do rotary drills work on sandstone?

Soft rock, like sandstone, may respond well to rotary drills, while hard rock, such as granite, demands robust percussion or diamond drills. Knowing the specific characteristics of the rock helps in determining the drill's capabilities and limitations to maximize drilling efficiency.

What are the different types of rock drilling?

Types of Drills: The landscape of rock drilling is vast, with rotary, percussion, diamond, and masonry drills catering to different needs. Choosing the right type can greatly affect not just efficiency but also the quality of the drilling performed.

How technology is transforming rock drilling?

Recent years have seen an influx of technology-driven solutions in rock drilling. High-performance drills are becoming equipped with smart sensors and automation capabilities. These innovations enable real-time monitoring of drilling conditions, ensuring precision and efficiency.
