How does a GA oil injected screw compressor work?

any compression process is transformed into heat. For GA oil-injected screw compressors, the major part of the compression heat is dissipated through the oil system. The Atlas Copco energy recovery (ER) systems are designed to recover most of the above-mentioned heat by transforming it into warm or hot water without an

How many questions are there to test your compressor knowledge?

We have organized 100 questions to test yourself and others on basic compressor knowledge. The material covers reciprocating compressors, rotary screw compressors, air piping, safety valves, receiver tanks, heat exchangers, drains and many other topics. The questions are true and false as well as multiple choice.

How do you classify an air compressor based on discharge pressure?

Classification of Compressor on basis of Discharge Pressure: 1 bar = 10<sup>5</sup> Pa = 1.01972 kgf/cm<sup>2</sup> Air flows steadily at the rate of 1 kg/s through an air compressor at 10 m/s, 100 kPa and 1 m<sup>3</sup>/kg and leaving at 6 m/s, 800 kPa and 0.2 m<sup>3</sup>/kg. The internal energy of the air leaving is 100 kJ/kg greater than the air entering.

What is the difference between a screw compressor and a centrifugal compressor?

Screw compressor: A screw compressor is a rotary type of compressor. It can be delivered compressed air continuously with minimum variation in delivery pressure. It is used for low-pressure applications up to 8 bar.  
Centrifugal compressor:

How much does the air compressor test cost?

The test has 100 questions and answers on compressors, air piping, heat exchangers and many other topics. The delivery will be made via email with a pdf file for the test (42KB file size) and a separate pdf file for the answers (117KB file size). You can get a copy for only \$27.00US with Free Shipping.
