What is a 30 hp air compressor?

Equipped with a 30 HP (22 kW) engine, the device offers air flow ranging from 730 to 3300 l/min at a maximum pressure of 10 bar. Variable speed (IVR) technology allows for dynamic adjustment of operating parameters, making it an ideal choice for companies requiring a flexible and economical source of compressed air.

How much current does an air compressor draw?

The actual amount of current that your particular compressor draws will depend on its size and design. For example, a smaller, portable air compressor may only draw 8 amps while a larger, industrial-size air compressor could draw 25 amps or more. Additionally, the type of motor used in the air compressor can also affect its power consumption.
