What is a down the hole drill?

A "down the hole" (DTH) drill is a piece of drilling equipment used in mining, construction, and exploration activities. It is specifically designed for drilling large-diameter holes in hard rock formations.

Why should you choose a downhole hammer drill?

Shock Resistance- Built to endure high impact, our downhole hammer drills prevent premature wear or damage. Adaptable Sizing - Available in various sizes, these hammers cater to a range of drilling requirements, from small hole hammer projects to large boreholes.

What is a blasthole rig & Drill?

Blasthole rigs and drills don't need much explanation. They're used for drilling a hole into the surface of the rock, packing the hole with explosives and then detonating those explosives in the blasthole to break up rock and hard minerals to make it easier to remove.

What is a down the hole hammer?

One of the most commonly used tools in the drilling industry to meet such challenging scenarios is the Down the Hole Hammer (DTH hammer). DTH hammers are most used in hard rock formations and are designed to tackle complex tasks like drilling in populated areas without putting existing structures at risk.

What are the advantages of DTH drilling?

DTH drilling offers several advantages, including high drilling speed, efficient energy transfer, and the ability to drill deep, straight holes even in hard rock formations. It is commonly used in applications such as mineral exploration, blasthole drilling, foundation drilling, and water well drilling.

What makes a good drilling machine?

Robust design is built to last and adds safety to daily work. An accurate control system with simple icon displays makes drilling easy. Clear gauges for drilling parameters, compressed air, feed and rotation pressure are some of the features that also guide the operator for more productive drilling.
