

How much is the down-the-hole drilling rig shift fee

How much does a drilling rig cost?

Company A needs a drilling rig for a one-week project and decides to rent a rig at a cost of \$2,500 per day. The total cost for the rental would be \$17,500. On the other hand, Company B needs a drilling rig for a year-long project and decides to lease a rig at a cost of \$50,000 per month. The total cost for the lease would be \$600,000.

How much does it cost to drill a horizontal well?

Cost depend on the depth and complexity of the well. Modern horizontal well drilling costs can easily exceed \$4,000,000 just in the drilling phase. Without drilling complications these wells generally take about 3 weeks for the drilling phase. Moving a drilling rig is not a simple task.

What factors affect the cost of a drilling rig per day?

Several factors can contribute to the cost of a drilling rig per day. These include the type and size of the rig, its location, depth and complexity of the drilling operation, availability of skilled personnel and support services, as well as the prevailing market conditions. All these factors can affect the overall cost.

Does drilling cost increase with depth?

Drilling cost tend to increase exponentially with depth. It is a good strategy for drilling engineers to be dependent on previous data to estimate drilling time and cost for future operations. When enough data are available for a certain region, curve-fitting drilling cost data can be generated.

How much does horizontal drilling cost?

Average horizontal well drilling costs range from \$1.8 MM to \$2.6 MM and account for 27% to 38% of a well's total cost. Before the expansion of horizontal drilling within unconventional plays, drilling costs ranged from 60% to as Figure 2-1: Allocation of drilling and completion much as 80% of a well's cost.

What are rig day rates & diesel costs?

Rig day rates and diesel costs are related to larger market conditions and overall drilling activity rather than well design. Rig related costs can range from \$0.9 MM to \$1.3 MM making up 12% to 19% of a well's total cost.
