

How to connect the 40A current transformer of screw air compressor

Can a pressure switch be wired to a 40A relay?

In this article, we will learn how a pressure switch is wired to a 40A relay for use with a 12 or 24v air compressor. If your pressure switch has the relay built-in, please see our article here. ***IF YOU ARE USING A 24-VOLT AIR COMPRESSOR, YOU WILL NEED A 24-VOLT RELAY!**

How to attach air compressor wires?

It's time to attach the wires to the air compressor. First, examine the connection points in the box to ensure the correct placement of each wire. You will find a ground wire, two hot wires, and a neutral wire. However, the neutral wire may not be necessary, depending on the compressor's settings. In this case, it can be removed.

What wire turns on a compressor?

The wire that turns on the compressor varies depending on the specific system and configuration. Generally, the wire responsible for controlling the compressor is connected to the thermostat, which detects the temperature and signals the system to turn on the compressor when the temperature rises above the desired level.

How do you connect a pressure switch to a compressor?

Take the red lead from the compressor and connect it directly to pin 87 on your relay. This should be the last connection needed for the relay. Now that our relay is wired up, you are now left with one side of the pressure switch to complete.

How do you connect a air compressor to a fork?

Loosen the screws slightly with a screwdriver, place the fork under it, and screw it back. It's time to attach the wires to the air compressor. First, examine the connection points in the box to ensure the correct placement of each wire. You will find a ground wire, two hot wires, and a neutral wire.

How do you connect a compressor to a relay?

Slide the connector over pin 87, and crimp the exposed red wire in the connector. Pin 30 is the easiest connection to complete with this setup. Take the red lead from the compressor and connect it directly to pin 87 on your relay. This should be the last connection needed for the relay.
