

How to core with a down-the-hole drill video tutorial

How do you use a core drill?

Start with a pilot hole: It is generally recommended to start drilling by creating a small pilot hole. This will help guide the core drill and prevent it from wandering or slipping during drilling. Maintain good posture: When using a core drill, stand in a stable position with your feet shoulder-width apart.

How do you drill a hole with a guide drill?

Position the tip of the guide drill on your drilling mark and start the drill slowly, increasing speed slightly until the pilot drill starts biting into the wall. Keep drilling until the core drill teeth hit the surface of the wall. You will feel them bite once they do. When drilling your hole, always hold the drill and core bit dead level.

Can you drill a hole at an angle?

When drilling your hole, always hold the drill and core bit dead level. You do not want to drill in at an angle and cause the hole to slope up or down! Also, drilling at an angle can easily break the teeth off of the core bit rendering it useless. A quick and easy way to tell is to withdraw the core bit from your hole and inspect it.

Can you use a core drill bit to drill a hole?

Using a core drill bit to drill out a hole for a soil pipe, extractor fan or waste pipe is a fairly easy task as long as you take your time and ensure the core bit and drill are both dead level. All project content written and produced by Mike Edwards, founder of DIY Doctor and industry expert in building technology.

What is core drilling?

Core drilling is one of the most specialized techniques for cutting cylindrical holes such as concrete, brick, or asphalt surfaces. These holes are useful for activities such as fitting air conditioning and heating systems, pipework, and electric wiring.

What materials are drilled using a core drill?

Concrete: Concrete is one of the most common materials drilled using a core drill. It is a highly durable and strong material, and drilling into it requires a special diamond-tipped core drill bit. Concrete core drilling is commonly used in construction projects to create openings for pipes, conduits, and vents.
