

How to debug a multi-screw air compressor

How does a screw compressor work?

A screw compressor can run loaded ('pumping air') or unloaded ('idle'). The inlet/loading valve opens and closes according to air demand. The inlet valve is controlled by a solenoid valve that supplies control air to the inlet/loading valve. Check solenoid valve coil and solenoid valve operation.

How do you connect a compressor to a roof ventilator?

Connect an exhaust duct from the compressor to the roof ventilator. Local exhaust ventilation to control temperature requires much lower air flow rate. If air is exhausted from the room, make-up air must enter the room. Local exhausting requires much less air flow. Connect an exhaust duct from the compressor to the roof ventilator.

Why does my compressor trip on over temperature?

If your compressor trips on over temperature, it could be any of the following: Ambient temperature too high or not enough ventilation. A screw compressor can run loaded ('pumping air') or unloaded ('idle'). The inlet/loading valve opens and closes according to air demand.

What if I can't solve my air compressor problems?

If you aren't able to solve your air compressor problems, including anything not mentioned above, we welcome the opportunity to have a look at your machine. Call Antler Pumps at 212-534-2500, or schedule an appointment online with our easy contact form.

How do you fix a bad air compressor?

Here are a few more air compressor problems and some things to try on your own to fix them: Oil in reservoir has a milky appearance: air intake needs to be less humid to reduce air in the oil. Compressor vibrating too much: tighten mounting bolts, and make sure the surface is level.

What happens if an air compressor breaks down?

When an air compressor breaks down, productivity may decline or stop altogether. Fortunately, there are things you can check on your own to decide if you have a serious compressor problem or something that can be fixed quickly. It's important to remember when troubleshooting to always follow safety SOPs and wear necessary protective equipment.
