What is oil rig decommissioning?

Decommissioning an oil rig is the process of ending or partially ending operations at the rig. There are three kinds of decommissioning for offshore oil platforms: Hot (or warm) stacking, cold stacking, and total decommissioning.

Why do oil rigs get decommissioned?

The main reason oil rigs get decommissioned is that the prices of oil (and gas) are too low to enable these rigs to operate profitably. The other reason is that the oil wells have run dry. How much does it cost to decommission an offshore rig?

How much does it cost to decommission an offshore rig?

According to Bloomberg, it costs roughly \$40,000 per day to warm stack a rig, while cold stacking costs significantly less, at \$15,000 per day. On an annual basis, service providers can save over \$9 million by deciding to cold-stack a rig rather than warm-stack it.

What is cold stacking in oil rigs?

Cold stacking is the equivalent of shutting down a factory in manufacturing- the rigs and equipment are packed up and stored, and employees tied directly to the operation of the equipment are laid off. Why do oil rigs get decommissioned?

Should you warm-stack a rig?

On an annual basis, service providers can save over \$9 million by deciding to cold-stack a rig rather than warm-stack it. There is no one correct answer when it comes to deciding on whether to warm-stack or cold-stack a rig.
