

How to fix the tire with an air compressor video

How do you fix a flat tire compressor?

Remove the tire sealant canister (4) and compressor from its storage location. Remove the air only hose (10) and power plug (9) from the bottom of the compressor. Place the compressor on the ground near the flat tire. Attach the air only hose (10) to the sealant canister inlet valve (1) by turning it clockwise until tight.

Do you need an air compressor for low tire pressure?

Whether you need to top off your tire pressure due to a slow leak, or if you have a partially or completely flat tire, having an air compressor available offers a quick and simple solution to fix your low tire pressure problems.

How to use an air compressor on a flat tire?

Position the compressor near the flat tire, then attach the air hose and include the quick coupler at the end. This will allow you to push air into the valve stem. If there's a safety position on the nozzle, make sure to activate it.

Do you need a compressor for tire maintenance?

You don't even need a full-sized compressor to complete basic tire maintenance - portable air compressors and small 12-volt tire inflators can be handy for flat or low tires when you're out on the road, and are great for routine tire pressure checks.

How do you install a tire compressor?

Place the compressor on the ground near the flat tire. Attach the air only hose (10) to the sealant canister inlet valve (1) by turning it clockwise until tight. Slide the base of the tire sealant canister (3) into the slot on the top of the compressor (6) to hold it upright.

How do you inflate a car with an air compressor?

Start the vehicle. The vehicle must be running while using the air compressor. Press the on/off button (5) to turn the tire inflator kit on. The compressor will inflate the tire with air only.
