

How to measure the elbow of screw air compressor

How to find air compressor fittings?

You must check and measure the diameter of your tubes for a connection using an NPT chart. You can use this data to find the different air compressor fittings you might require. Compressed air plugs, couplers, and connectors are different types of air compressor fittings that are necessary for connecting mechanical equipment to pipelines.

What are air compressor fittings?

Air compressor fittings are essential to keeping your unit running efficiently and delivering the air power you require for your operations. This page will provide all the relevant information on air compressor fittings sizes, including both NPT fittings and metric fittings. What Are Compressed Air Fittings? What Are Compressed Air Fittings?

How do I know if my air compressor is male or female?

Male threads are on the outside of the fitting, while female threads are on the inside. Next, identify whether the thread is tapered or straight: Tapered threads (like NPT or BSPT) tighten as they screw in and require sealing tape or thread sealant. NPT threads are by far the most common thread type used on most air compressors.

How do you measure a threaded airport?

To determine the size of a threaded airport in an air tool handle, air cylinder, valve, or female thread in any compressed air component, you will want to measure the width of the hole in inches. That's the distance across the middle of the opening.

What is a threaded boss in a compressed air system?

Most compressed air system fitting sizes follow the NPT (National Thread Tapered) standard, while others use Metric fitting standards, both denote the thread size but are different. A threaded boss is a threaded hole in the device or air tool into which you insert or thread a fitting.

How do you measure a fitting?

When you measure the fitting just subtract 1/4 and you will be near. If you measured the female thread as 1/2" subtract a 1/4 makes it 1/4" BSP. 1/4" BSP is the most common thread type on air tools, if you are buying higher brands then that isn't the case.
