How do you remove a broken drill bit?

Rotate the pliers counterclockwise to loosen the drill bit. Keep the pliers clamped shut on the end of the broken bit and start to turn them the opposite direction that you were drilling, which is generally counterclockwise. The broken bit will loosen and start to turn. Continue rotating the pliers to start removing the broken drill bit.

How do you loosen a bit from a drill chuck?

Turn the key counterclockwise in the holes. Your drill should have come with a key that fits into the holes in the chuck. Fit the end of the key into the hole in the chuck then turn the key counterclockwise 5-6 times. This should start to loosen the bit from your drill.

How do you drill a hole in a drill bit?

Clamp the workpiece securely in place using a vise to prevent movement during the drilling process. Use a sharp new drill bit smaller than the broken one to create a pilot hole at the center mark. Swap to larger drill bits incrementally to widen the hole, ensuring each step is precise and centered.

How do you remove a drill chuck?

Manually remove a drill bit by hand, with a screwdriver, or with a wrench. Grip the end of the drill chuck with one hand and pull the drill's trigger with another to rotate the bit free. Insert your drill's key into the holes along the chuck and turn it counterclockwise 5-6 times. Locate the chuck at the end of the drill.

How do you divot a broken drill bit?

Create a divot on the bit with a center punch. A center punch is a metal tool with a point that you can use to make a divot. The divot will help guide the drill bit that you'll use to drill into the broken bit. Place a center punch on the end of the broken drill bit. Take a hammer and strike the end of the center punch to make a small divot.

How do you lubricate a drill bit?

Apply cutting oil to the drill bits to reduce friction and heat buildup, making the drilling process smoother. Maintain a steady hand and consistent pressure on the drill to prevent the bit from slipping or breaking further. Periodically stop drilling to remove metal shavings with a clean cloth and check the depth of the hole.
