What is a screw compressor?

A screw compressor is a type of rotary compressor which compresses air due to screw action. The main advantage of using this compressor is that it can supply compressed air continuously with minimum fluctuation in delivery pressure. It is usually applied for low-pressure applications up to 8 bars.

How does a rotary screw compressor work?

The screws produce a hydraulic seal to compress the air. An oil-flooded system, which is the more common type of rotary screw compressor, uses this process to complete the compression cycle: Air enters the machine: Air around the system enters it through the inlet valve.

What are the different types of rotary screw air compressors?

There are two basic kinds of rotary screw air compressors: oil-injected and oil-free. Oil-injected screw compressors are the most common type of industrial air compressor and work well for most applications. Within these categories, there are also some subtypes to consider.

How much noise does a rotary screw air compressor make?

A typical rotary screw air compressor will operate at 65-75 dBA, or somewhere between the noise level of a car engine and a vacuum cleaner. A rotary screw air compressor will also generate less vibration. Cooler Temperatures: Typical internal operating temperatures for a rotary screw air compressor are 140-160°F.

What is a dry type screw compressor?

In dry-type screw compressors, there is no oil used for lubrication. The rotors are designed to run with minimal friction, and the air remains oil-free. These compressors are ideal for applications where clean, dry air is required, such as in the food and pharmaceutical industries.

Why is a rotary screw air compressor a good choice?

They conserve more energy by producing less heat and having an efficient design. Rotary screw compressors also use less oil than other compressors. You then save money on power and oil costs with this machinery. Provides more power: A rotary screw air compressor is efficient, but it also puts out more power for your operations.
