

Hydrological Well Exploration Drilling Rig Operating Procedures

What are the operating procedures for drilling operations?

21 Standard Operating Procedures for Drilling Operations 2. Stop pump as soon as pack-off is suspected. Continuous pumping will lead to rise in pressure resulting in compacting of cuttings resulting in permanent pack off and stop all chances of establishing circulation. 3. Try to go down while POOH or come up while RIH and establish circulation. 4.

What happens after planning a drilling rig?

After planning is complete, the next stage is the installation of the rig and drilling equipment. This process must be carried out meticulously to ensure all equipment is functioning properly. The rig is the backbone of drilling operations.

What is a drilling rig?

The rig is the backbone of drilling operations. The selection of a rig must be adjusted according to the field characteristics, the depth to be reached, and the surrounding environmental conditions. Modern rigs are equipped with advanced technology that facilitates monitoring and control of the drilling process.

Where should a drill rig be displayed if Bop is closed?

269 Standard Operating Procedures for Drilling Operations Work' signage is displayed properly at necessary places like work place, control room and rig floor. 10. In case BOP is closed, it should be clearly displayed at rig floor, driller's console and Accumulator Unit. 11. Portable Fire Extinguisher must be tested as per guidelines.

How to choose a drilling rig?

The rig must be chosen based on the field specifications and the type of drilling to be performed. Additionally, equipment calibration must be carried out to ensure optimal performance during operations. The planning stage is the foundation for the success of the drilling process.
