

Kilometer Drilling Rig Construction

How long can a drilling rig cross?

With the large drilling rigs on the market today, crossing lengths of more than 2 km have already been successfully completed. The constantly developing drilling technology already enables the trenchless laying of pipes up to a diameter of 56" (DN 1400) in almost all ground formations.

What is a horizontal directional drilling rig?

The most commonly used horizontal directional drilling rigs are rigs with a max. pulling force between 10t (100kN) and 30t (300kN). Typical applications of HDD technology include crossing watercourse, road and rail crossings, slope drilling, rock drilling, inner-city and extra-urban longitudinal laying and house connection drilling.

How are drill rig samples Paid?

Driven split barrel samples and thin-walled tube samples are paid on an each basis. Rock core of various sizes is paid by the linear foot (meter). We pay the contractor to mobilize the drill rigs whether on land, or water (floating) or on water using a stationary platform (typically, a jackup barge).

Do you pay the contractor to mobilize the drill rigs?

We pay the contractor to mobilize the drill rigs whether on land, or water (floating) or on water using a stationary platform (typically, a jackup barge). Unless there are extenuating circumstances, we pay the estimated quantity of drill rigs, provided the minimum percent working time requirements of the specifications are met.

What is directional drilling?

Drilling of horizontal and multi-hole wells is one of the most effective field development methods. The directional drilling workshop at Zhigermunayservis LLP employs qualified engineers and is equipped with the state-of-the-art equipment that enables the company to provide full support for effective navigation during drilling:

Why did directional drilling complications occur?

The drilling complications were represented mainly by the mining and geological conditions of the fields, due to small vertical well depth and a huge number of nearby holes of the adjacent wells, which in its turn required maximum control and experience of the field directional drilling engineers.

An drilling rig is towed around the world by a single tug. A brand-new drilling rig, worth 500 million dollar, has to go from South Korea to Europe. The problem: It is too gigantic ...
