

L6 down-the-hole drill video

How does a down-the-hole drill work?

In down-the-hole drilling a drill rod is fitted with a hammer at its lower end. The hammer, which is mounted on the drill bit, is activated through the addition of compressed air and driven into the ground - simultaneously rotating and impacting. A flushing current collects the loosened drill cuttings and conveys them upwards.

What is a down-the-hole drilling method?

The video shows the down-the-hole drilling method for very hard soil or rock. A rotary drilling rig, type LB 20, working with down-the-hole hammer inside a casing. A flushing current conveys the loosened drill cuttings upwards and exits at the upper end of the casing.

What are the advantages of a down-the-hole drill rig?

1. The Down-the-hole drill rig for soft and medium rock formations in quarries. High productivity by means of a high pressure compressor in combination with the perfect work station. 2. The ability to drill in different angles and to accurately set the inclination and control the depth of the hole contribute to the overall economy of the operation.

What are the advantages of ROC L6 rig?

The boom and feed movements of ROC L6 give the rig excellent flexibility for vertical, horizontal and angle drilling. Feed rate max. Feed force, max. Tramping speed, max. Zhaoxing can help you to improve drilling efficiency and reduce the production cost.
