

Miners repairing rock drills underground

Can timberock international repair a rock drill?

Timberock International has over 25 years of experience in the repair of pneumatic and hydraulic rock drills. We offer an affordable alternative for the repair of most models of rock drills. Our repair facility includes all the required machinery to repair body components, and test your rock drill before being returned to the customer.

Are rock drills a necessity in underground mining?

Rock Drills are almost a necessity in underground mining. Your work is made relatively more manageable and simpler through the proper usage of Rock Drills or Drifters as they are sometimes known. The fact that they can be used remotely means that you will be safe while doing your mining work.

How to choose the best drills for underground mining?

If you are doing commercial underground mining, it is advisable to go for the relatively more powerful drills. Such drills will help you save time since you will be able to do more in a shorter time. The drills brand is also important since there are companies that make top-notch drills with all the right qualities.

How do rock drills work?

Rock Drills are usually mounted on feeds on equipment known as Jumbo Drills and then directed to where they are supposed to drill holes. The feeds are attached with booms that resemble arms and are flexible. The flexibility is meant to allow you to adjust the unit depending on where you want to drill.
