

What is a screw compressor?

A screw compressor is a type of rotary compressor which compresses air due to screw action. The main advantage of using this compressor is that it can supply compressed air continuously with minimum fluctuation in delivery pressure. It is usually applied for low-pressure applications up to 8 bars.

What is a liquid injected screw compressor?

In liquid-injected screw compressors, a liquid is injected into the compression chamber and often into the compressor bearings. Its function is to cool and lubricate the compressor element's moving parts, to cool the air being compressed internally, and to reduce the return leakage to the inlet.

How does compressed air & compressor oil work?

Now we have a mixture of compressed air and compressor oil. Compressed air/oil mixture This mixture leaves the screw element through a one-way valve. This valve makes sure that the oil cannot flow back into the compressor element through the exit pipe (this could happen when the compressor stops).

How does oil injection work?

The oil injection ensures lubrication, sealing and cooling of the screw air end. The oil and air mixture is compressed in spaces between the screw impellers and then flows into the oil separator tank 3 where most of the oil is precipitated from the mixture.

How do you separate oil from air in a compressor?

Compressed air/oil mixture This mixture leaves the screw element through a one-way valve. This valve makes sure that the oil cannot flow back into the compressor element through the exit pipe (this could happen when the compressor stops). The oil separator Now we need to separate the oil and the air. This is done in the separator tank.

What is compressed air oil used for?

The oil is there to cool the air, as the air gets very hot during compression. It's also there for lubrication and sealing off the clearances between the screws. More detailed information can be found on our screw air compressor element page. Now we have a mixture of compressed air and compressor oil. Compressed air/oil mixture
