Down-the-hole drilling (DTH) essentially involves a drilling hammer at the bottom of a drill string. It relies on three elements for drilling holes: bit loading (weight), rotation and air.

Drilling rigs are complex mechanical structures designed to drill through the Earth's surface to access oil, gas, water, or minerals. One of the ...

If hole conditions are suitable, we may optimize the rotary table's penetration rate (ROP). This will keep an even weight at the bit and prevent the drill string from hanging up. Minor incremental ...

Rotary drilling rigs are among the most sought-after drilling tools in the modern-day industry, thanks to their extreme efficiency and versatility, ranging from ...

Analysis of common faults of down-the-hole drilling rigs Failures that often occur during the drilling process mainly include: relatively severe swing of the drill ...

Rotary drilling is any form of drilling that creates a hole by rotating a bit at the bottom of the hole while using a fluid to remove the cuttings. This method employs either: rods ...
