

By Pete Sawochka-Dalton While a number of compressor types exist--scroll, reciprocating, rotary screw, centrifugal, and more-- all air compressors do one thing: compress air.

Water separator - The water separator is an important part of a screw air compressor. We place the moisture separator after the after cooler to remove liquid moisture from the compressed air.

Oil free rotary screw air compressors are the ones which are air cooled and water cooled and also provides the same flexibility as that of an oil flooded rotary whenever the oil free air is required.
