

Rock drill rod rack installation video

How do you install expanding rock anchors?

7 key steps to install expanding rock anchors. Choose anchor site carefully. Rock anchors will only perform effectively in solid competent rock (Class 0 Soil). Drill the hole into the competent rock a minimum depth of 12 inches along the drill steel. Be sure to drill so that the anchor rod will be in line with the guy.

How to install a DIY drill storage rack?

Drill holes in the PVC drill holders opposite the slot. You'll want to fasten each holder to the shelf with at least two screws. This will ensure that the rack is strong enough to hold the drills securely. Now, mount the holders to the underside of the shelf you're using. Step 4: Load up your DIY drill storage rack.

How do you use a rock anchor Rod?

Use a bar through the eye to turn the rod until the anchor is fully expanded against the sides of the hole. Removing the wedge tie will occasionally facilitate the wedge expansion. Rock anchors set in holes drilled 12 inches deep in competent Class 0 Soil (hard rock) will develop the full strength of the anchor rod.

How do you drill a hole with a wedge anchor?

Be sure to thoroughly clean the drilled hole of rock dust and debris. Slide the anchor down in the hole. Use a bar through the eye to turn the rod until the anchor is fully expanded against the sides of the hole. Removing the wedge tie will occasionally facilitate the wedge expansion.

How deep should a hole be drilled?

Drill the hole into the competent rock a minimum depth of 12 inches along the drill steel. Be sure to drill so that the anchor rod will be in line with the guy. Holes should be drilled so the diameter is optimally an 1/8th inch larger than the diameter of the unexpanded anchor. For example, the hole drilled for a R315 is 1-7/8 inch diameter.

How strong should a rock anchor be?

Removing the wedge tie will occasionally facilitate the wedge expansion. Rock anchors set in holes drilled 12 inches deep in competent Class 0 Soil (hard rock) will develop the full strength of the anchor rod. This can be either 3/4 inch rod - Minimum Ultimate Strength of 23,000 lbs.- or 1 inch rod - Minimum Ultimate Strength of 36,000 lbs.
