Why did Soviet physicists dig the world's deepest man-made pit?

For a long time, the Cold War has been going on with the United States and the Soviet Union trading out-of-this-world arms on Earth and even across space. Hence, Soviet physicists dug the world's deepest man-made pit - Kola Superdeep Borehole - to outrun the United States.

How long did the Kola Superdeep Borehole project take?

The Kola Superdeep Borehole project housed scientists and drillers in that remote location from 1970 to 1994. It took them 20 years to reach 40,000 feet, almost a mile deeper than the deepest ocean trench. There, the heat was nearly double what they expected, and the rock became plastic, oozing back into the borehole.

What was discovered at the Kola Superdeep Borehole?

Gold, copper, and nickel deposits were also discovered. Although the Kola Superdeep Borehole was the world's deepest artificial location, it was best known for its urban legend tale. When Lotte Geevan, a Dutch artist, lowered a microphone into the pit, it was said to pick up a rumbling sound she characterized as "haunting" and "hellish."
