How does an anchor rig work?

**Drilling:** The anchor rod is drilled into the slope at a specified angle and depth using a self-drilling anchor rig.

**Grouting:** A grouting machine injects slurry through the hollow channel of the rod, allowing it to exit through the drill bit.

What should a rig do if an anchor breaks out?

in a sand seabed. In this case the rig should maintain a steady back tension of about 30 T to pendant and breaks out the anchor. If the anchor has been set to a line tension exceeding rig of the rig to cause the anchor to drag. has broken out of the seabed. Stop the rig and vessel winches at this point. The vessel winch roller.

What is the last operation before a rig move?

The last operations before a rig move is to retrieve the the rig to transit draft. At transit draft, the bolsters are visible. move. a tug is made fast to the tow bridle, and then the last anchors can be retrieved. During the tow, the rig has a good stability, and can endure severe weather.

How do you hang an anchor on a rig?

The anchor will be hanging with its fluke pointing towards the rig. brake to maintain not less than 35 T tension in the anchor chain. This will ensure the chaser remains seated on the anchor shank tip while the vessel hauls the pendant line inboard. Stop the vessel winch when the anchor still hangs clear of the vessel propeller wash.

What are anchor handling procedures?

INTRODUCTION procedures provided by charters. Anchor handling involves a number of special marine operations. astern movements of the anchor handling vessel. The vessel's pulled astern at speed by the tension in a heavy anchor arrangement. Any simultaneous loss of Figure.2 pull. The vessel may be extra transverse forces.

How do anchor rods & Grout work?

**Solidification:** Once the grout hardens, the anchor rod and grout form a unified anchor body. As slope deformation occurs, the anchor body resists movement through friction with the surrounding rock and soil. This prevents slope failure by stabilizing the rock mass and distributing stresses across the system.
