Why do screw compressors have a small footprint?

This is to minimize mechanical losses (due to heat at very high speed) and volumetric losses (air losses due to very low speed) during compression. A good example of a screw compressor that can produce large volumes of compressed air and with a small footprint is our GA VSD +air compressors.

What is a Rotor screw air compressor?

Unlike piston compressors, in screw air compressors, there are no valves or other mechanical forces that can cause unbalance. This allows a rotor screw compressor to operate at high speeds while combining a large flow rate with small exterior dimensions.

Which air compressor is the most energy-efficient?

With energy savings of 60% on average compared to fixed-speed models, the GA 5-37 VSD is the most energy-efficient compressor on the market.
