How does a screw compressor work?

A screw compressor can run loaded ('pumping air') or unloaded ('idle'). The inlet/loading valve opens and closes according to air demand. The inlet valve is controlled by a solenoid valve that supplies control air to the inlet/loading valve. Check solenoid valve coil and solenoid valve operation.

How do I know if my rotary screw compressor is bad?

Check the voltage when the compressor is running. If the voltage drops significantly when the compressor starts/runs, you have a bad connection somewhere. Check all relays, fuses and electrical connections. Common rotary screw compressor problems and issues that have been reported. Get help with the most common problems for rotary screw compressors.

How to check if oil separator does not unload?

Compressor does not unload. Check if pressure switch is correctly set and working. Check inlet valve and loading solenoid for good operation. If the safety valve is located before the oil separator, check differential pressure of oil separator. Water is a natural by-product of air compression.

How do you connect a compressor to a roof ventilator?

Connect an exhaust duct from the compressor to the roof ventilator. Local exhaust ventilation to control temperature requires much lower air flow rate. If air is exhausted from the room, make-up air must enter the room. Local exhausting requires much less air flow. Connect an exhaust duct from the compressor to the roof ventilator.

How do I know if my air compressor is bad?

Check the voltage when the compressor is running. If you have a bad connection somewhere. Check all relays, fuses and electrical connections. Michigan Air Solutions is a leading distributor and servicer of compressed air systems. We believe you should be able to count on a reliable compressor for years of trouble-free use.

What should I do if my air compressor is too low?

If the capacity of the air compressor is really too low, check the following: Check differential pressure over oil separator. Replace separator when necessary. Check and replace compressed air filters (if installed). Compressor does not unload. Check if pressure switch is correctly set and working.
