

Screw air compressor factory inspection standards

What does observed mean in a screw compressor inspection?

The term observed means that the purchaser requires notification of the timing of the inspection or test. The screw compressor testing or inspection is performed as scheduled, however, if the purchaser or his agent is not present the vendor can proceed to the next step.

Why do you need a screw compressor inspection?

As one of the most widely used air compressor models on the market, screw compressors are in high demand. With tight tolerances, these parts require an inspection solution that delivers both high accuracy and the fastest possible scanning speeds for maximised throughput.

What are the safety standards for air compressors for process industries?

These are covered by ASME B19.3, Safety Standard for Compressors for Process Industries. The principles promoting safe generation and use of compressed air are not restricted to new air compressor systems. It is recommended that all air compressor systems be reviewed to consider possible changes due to revision of this Standard.

What are the inspection requirements for air compressor / receiver?

As can be seen below, the inspection requirements refer back to AS3788:2006, where Table 4.1 gives the periodic inspection requirements. If the air compressor / receiver has a PV (design pressure in MPa x volume in L) value below 150 MPaL does not require period external and internal inspections.

Who conducts inspections & inspections of screw compressors?

1-3-2 The examinations and inspections shall principally be carried out by the staffs of the quality control and assurance of screw compressor manufacture, and may be, if required, witnessed or observed by Purchaser, Client or appointed third-party inspection agent.

What is the temperature limit for a screw compressor?

Standard screw compressor package design based on IIAR/mechanical code equipment room limits of 104°F(40°C). Screw package high temperature limit based on WEG motor. Other motor ratings are available for special applications. Screw package low temperature limit based on oil temperature limits.

1.0 Products Screw-type air compressor structure of a unique design, a compact, stylish appearance, high efficiency, small energy consumption, low noise characteristics and long life, ...

This Standard assumes as essential that the compressor and air compressor system components be designed by qualified engineers in accordance with recognized standards and specifications.
