

Screw air compressor high pressure fault alarm

How do I troubleshoot rotary screw compressors?

Troubleshooting rotary screw compressors doesn't have to be overwhelming. By identifying common issues like insufficient air pressure, oil carryover, or high energy consumption, and taking proactive steps to address them, you can keep your system running smoothly and efficiently.

How does a screw compressor work?

A screw compressor can run loaded ('pumping air') or unloaded ('idle'). The inlet/loading valve opens and closes according to air demand. The inlet valve is controlled by a solenoid valve that supplies control air to the inlet/loading valve. Check solenoid valve coil and solenoid valve operation.

How to check air compressor temperature?

Compressor temperature: The temperature of the oil and gas mixture at the outlet of the compressor reaches 120°C. Solution: Keep the air compressor well ventilated, check that the radiator is not covered by debris, and that the radiator has good heat dissipation. Check the air compressor oil level, cooling fan, and temperature sensor. 4).

How do I know if my air compressor is bad?

Solution: Keep the air compressor well ventilated, check that the radiator is not covered by debris, and that the radiator has good heat dissipation. Check the air compressor oil level, cooling fan, and temperature sensor. 4).
Low start-up temperature: the air compressor panel shows that the temperature is lower than 1?

Why is my rotary screw compressor overheating?

Solving insufficient air pressure is critical for maintaining productivity and avoiding further system stress. When a rotary screw compressor begins overheating, it's a clear sign that something is amiss. High operating temperatures can lead to inefficiencies, system shutdowns, and even long-term damage to critical components.

What does a high head pressure alarm mean?

Hello Altaleb. The high head pressure alarm indicates a possible issue with the condenser. Check that there are no blown breakers for the condensing unit (outside unit) and that the fans are spinning. If this alarm has only happened once, reset the alarm on the unit and monitor it closely.
