Why does my rotary screw air compressor make a strange noise?

In a rotary screw air compressor, an unusual noise will typically be the result of worn air end bearings. Pay particular attention to oil leaks and strange noises from the motor bearings as these are the two main indicators of imminent problems with an air compressor. 2. Drive Train

How often should a rotary screw air compressor be inspected?

Improper belt tension: The tension of the belt is critical to the moving operations of a rotary screw air compressor. If the tension is off, the machine can be rendered inefficient as it overworks to maintain an even pace. Ideally, the tension of the belt should be inspected every 500 hours and adjusted if necessary.

What are the risks of an irregular air compressor maintenance schedule?

One of the biggest risks of an irregular air compressor maintenance schedule is the chance of sudden, unexpected emergencies. If you only inspect your compressor on occasional, irregular intervals, you are not keeping track of how it performs on the inside.
