

What is a screw compressor?

Screw compressor combines thermodynamics and flow processes. Both of them are dependent on screw compressor geometry. A combination of all is a prerequisite for calculation of the screw compressor performance. As such, it represents a complex process which may be solved by use of mathematical models, either one or multidimensional.

What are the new air compressor rules?

(The new rules are summarized in a presentation titled " Air Compressors--DOE's Current Regulations.") They became effective on January 10 th of this year and require that most air compressors (flow of 35 CFM-1,250 CFM and pressures of 75 PSIG-200 PSIG) meet new compressed air isentropic efficiency ratings.

What is a screw compressor design process?

As other design processes, the design of screw compressors is an interactive feedback process where the performance of the compressor is compared with those specified in advance. Usually this is a manual process where the designer makes a prototype system which is tested and modified until it is satisfactory.

How can we improve compressor performance & reduce the cost of screw machines?

Although, advances have been made in analytical procedures, which are gradually being adopted by designers to predict compressor performance more reliably, these improved methods of analysis can create, as yet unrealised, opportunities for further improving the performance and reducing the cost of screw machines.

How do you describe flow through a screw compressor?

and Structure Analysis of a Screw Compressor It has already been shown that flow through a screw compressor can be described by the mass averaged conservation equations of continuity, momentum, energy and space a

Can a computer model be used for screw compressor optimisation?

In order to make such computer models more readily accessible to designers and engineers, as well as specialists, the authors have developed a suite of subroutines for the purpose of screw machine design, Hanjalic and Stosic, 1997, which duly can be used in screw compressor optimisation.
