How do you connect an air compressor to a pipe?

For copper pipe, use copper T-connectors and elbows. For flexible rubber tubing, use air hose push fittings. Connect your compressor to the air lines with a short, flexible air hose. Plug 1 end of the hose into the hose connection station in the air line and 1 end into the air compressor.

How does a screw compressor compress air?

In a screw compressor, air is compressed by the rotation of the male rotor, which drives the female rotor. The compression process occurs due to the preset motor speed. To simulate this, an adaptive mesh is required, which is modified at the beginning of each timestep.
