

What is a screw-type air compressor?

Screw-type air compressor structure of a unique design, a compact, stylish appearance, high efficiency, small energy consumption, low noise characteristics and long life, is a smart environment-friendly product. It is widely applied in metallurgy, machinery, chemicals, and mining, and electric power industries as the ideal gas source equipment.

What is a screw air compressor?

Air compressor is modular in design, screw rotor, oil and gas separation extinguishers, coolers, are installed in a motor, within the framework of acoustic enclosures through the noise of rubber materials. Screw air compressor is the main components of screw head, the separation of oil and gas cylinder.

How to attach air compressor wires?

It's time to attach the wires to the air compressor. First, examine the connection points in the box to ensure the correct placement of each wire. You will find a ground wire, two hot wires, and a neutral wire. However, the neutral wire may not be necessary, depending on the compressor's settings. In this case, it can be removed.

How to start a screw compressor?

Standard screw compressor is equipped with microprocessor control panel. When compressor is at stop status, press this button to start the compressor. The compressor and activate block mode function at the same time. -- Stop Button: When the compressor is at running status, press this button to stop the compressor.

How do you wire an air compressor to a car?

Connect the three-phase wires from the compressor to the converter's three-phase input. Connect the single-phase wires from the converter's output to the power source. Always follow safety guidelines and ask an electrician if you are unsure about the wiring process. [What Size Air Compressor Do I Need To Work On Cars? \(Opens in a new browser tab\)](#)

How oil injected screw air compressor works?

The oil-injected screw air compressor has the characteristics of reliable running performance, few wearing parts, low vibration, low noise, and high efficiency. During the compression process, the compressor continuously sprays lubricating oil into the compression chamber and bearings by virtue of its own pressure difference.
