

# Screw and piston air compressor prices

What is the difference between a rotary screw and a piston compressor?

Piston compressors, also known as reciprocating compressors, are typically used for applications that require short, intense bursts of air. In contrast, rotary screw compressors are designed for applications that need a steady flow of air over extended periods.

What is a piston compressor?

Piston compressors, also known as reciprocating compressors, are commonly used in various applications due to their simplicity and effectiveness in delivering compressed air. It's important to evaluate several factors to ensure you select the right equipment for your specific requirements.

Does Eaton compressor sell rotary screw air compressors?

Eaton Compressor sells 7.5 HP rotary screw air compressors, along with a range of other rotary screw and piston air compressors. They offer the best warranty in the business.

How does a piston compressor work?

Piston compressors work by drawing air into a cylinder and compressing it with a reciprocating piston. They are generally best for lower volume air needs and have a duty cycle of about 60-70%, meaning they need to shut down periodically to prevent overheating.

How do I Choose an air compressor for my industrial needs?

When it comes to selecting an air compressor for your industrial needs, the choice often boils down to two main types: screw compressors and piston air compressors. Each type offers distinct advantages and disadvantages, making the decision critical for optimizing performance, efficiency, and cost-effectiveness.

How many gallons is a air compressor?

You'll find compressors from 1 to 30 gallons, oil-free and oil-lubricated, ultra-quiet, and with many form factors to choose from. Harbor Freight carries top-quality air compressors and inflators from Fortress, McGraw, and Central Pneumatic.
