What is a blast hole drilling machine?

The piston of the pneumatic impactor impacts the broken ore of the drill bit and is usually used for drilling holes of 80-250 mm in diameter in small and medium-sized mines. The blast hole drilling machine can drill holes in rocks above medium hard ( $f \geq 8$ ). The machine is cheaper and is especially suitable for small and medium-sized open pit mines.

What is a blast hole used for?

Blast hole drilling: Commonly used for drilling blast holes in mining and quarrying operations, as well as in road and tunnel construction. Anchoring: Applied for creating anchor holes in slope stabilization projects and retaining structures. Rock socketing: Used in dam and bridge construction to drill into rock for securing foundation supports.
