

Spiral water grinding rock drill

What is a spiral flush drill & how does it work?

Mincon's market-leading air control technology, Spiral Flush, is the safest way to drill in sensitive ground and tight urban spaces. It makes drilling safe by not discharging any air directly towards the soil - without sacrificing efficient flushing and fast drilling speeds in any hardness of rock.

Why is spiral flush a good option for DTH drilling?

This, in turn, can cause damage to nearby structures. As a result, the use of conventional DTH drilling is limited already in several city centers, shorelines and other sensitive areas around the world. Mincon's patented solution, Spiral Flush, eliminates the risk of air escaping into the overburden.

How does spiral flush air control work?

Our patented Spiral Flush air-control technology works by avoiding the discharge of high-pressure air into the ground. This market-leading technology minimises the risk of air escaping and over-drilling in complex and sensitive ground, such as urban environments.

What is a spiral flush mini?

Originally developed for Nordic well-drilling applications, the patent pending invention Spiral Flush Mini now offers the safety of the regular Spiral Flush in a much smaller scale. The airflow flushing the face of the pilot is reduced to absolute minimum which makes drilling small holes much safer in sensitive ground conditions.
