Can a screw type compressor be installed with a reciprocating compressor?

Screw type compressors should not be installed in air systems with reciprocating compressors without means of isolation such as a common receiver tank. It is recommended that both types of compressor be piped to a common receiver using individual air lines.

What PSI is a rotary screw air compressor rated for?

An air compressor is rated for a maximum pressure (PSI) at a particular airflow (in Cubic Feet Per Minute, or CFM). For example, a rotary screw air compressor may be rated at 125 PSI for up to 75 CFM. Pressure and CFM are inversely related; if you are using more air than the compressor is rated for, it will necessarily result in a drop in pressure.

Why is my air compressor too small?

If the compressor is too small for the demand, it may not be able to generate enough pressure. This could be due to a mismatch between the compressor size and the tools or equipment being used. An air compressor is rated for a maximum pressure (PSI) at a particular airflow (in Cubic Feet Per Minute, or CFM).

How much pressure drop should a compressed air compressor have?

There is always some degree of pressure drop across the compressed air distribution system but in a well-designed distribution system, this should not exceed 3%. For example, to achieve a PSI of 90 at the point of use, you may need to set the compressor to 100 PSI. Ideally, pressure drop will be closer to 3 PSI across the system.

Should a compressor be run at full load?

All units that are operating should be run at full-load, except one unit for trimming. Compressor systems are typically comprised of multiple compressors delivering air to a common plant air header. The combined capacity of these machines is generally sized to meet the maximum plant air demand.

What happens if air compressor pressure drops?

Of course, you won't be able to sustain your target cfm as the pressure drops, and over time your air compressor will likely start to cycle to increase pressure back into your tank. This will allow you to continue using your tools for much longer.
