

What are tunnel boring machines?

Abstract-- Tunnel-boring machines are the primary gear for the development of trenchless underground designing tasks,for example,rail travel,civil designing,railroad tunnels,and so on. This paper reviews various tunnel boring machine types,cutting tools,and machine performance through several case studies.

Does scientometric analysis predict tunnel boring machine performance?

This study employs scientometric analysis to investigate the current trajectory of research on tunnel boring machine (TBM) performance and collaborative efforts. Utilizing software tools like Pajek 5.16 and VOSviewer 1.6.18, it scrutinizes literature from 2000 to 2021 sourced from the Web of Science (WOS).

Is tunnel boring machine (TBM) a interdisciplinary field?

on tunnel boring machine (TBM) performance and collaborative efforts. Utilizing software tools like Science (WOS). The findings illuminate TBM research as an interdisciplinary and intersectoral field attracting increasing national and institutional attention. Notable contributions from China,Iran,

How tunnel boring machine is used in subsurface mining?

tunnel excavation is done by Tunnel Boring Machine (TBM). rock surface that lies ahead of it. This thrust causes the cutting disc tools to break the rocks. The grippers/braces the help of anchoring. Tunneling with it is much more they operate successfully. The Double shield tunnel boring machine used in subsurface mining has been shown in Fig. 1.

How to predict tunnel boring machine penetration rate with high accuracy?

This study employs a supervised learning method to predict the tunnel boring machine (TBM) penetration rate (PR) with high accuracy. To this end,the extreme gradient boosting (XGBoost) model is optimized based on two swarm intelligence algorithms,i.e.,the sparrow search algorithm (SSA) and the whale optimization algorithm (WOA).

What tools are used in a tunnel boring machine?

The excavation tools are wheel. With the rotational movement of the cutter head and tools loosen the rock and / or the soil at the tunnel face. cutting knives and / or disc cutters (discs) or rippers. To abrasion and water pressures. Figure 1. Double Shield Tunnel boring machine used in subsurface mining

A Visual Survey of Tunnel Boring Machine (TBM) Performance in Tunneling Excavation: Mainstream Direction, Brief Review and Future Prospects

The tunnel boring machine is a machine which has been developed in recent years and has revolutionised the tunnelling industry both making tunnelling a safer, more economic solution ...

Tunnel boring machine visual review

Full face tunnel boring machine "TBM" performance during the excavation of 6 tunnels in sedimentary rock is considered in terms of utilization, penetration rates and cutter wear. The ...

Double Shield TBMs are among the most technically sophisticated tunnel boring machines. They combine the functional principles of Gripper and Single Shield TBMs in one machine. In stable ...

The operating parameters of a tunnel boring machine (TBM) reflect its geological conditions and working status and are accordingly critical data for e...

The tunneling boring machine performance was predicted in a real-time manner based on the big data obtained from the tunnel construction of Yin-Song Diversion Project.

This study employs scientometric analysis to investigate the current trajectory of research on tunnel boring machine (TBM) performance and collaborative efforts. Utilizing software tools ...

Tunnel boring machines (TBMs) play a crucial role in the highly mechanized process of excavating hard rock tunnels. Mechanization extends beyond excavation to include the ...

Purpose Tunnel construction using a tunnel boring machine (TBM) entails precise machine positioning and guidance in the underground space. In contrast to traditional laser-based ...

Tunnel Boring Machine (TBM) excavation materials were recycled by sieving and separating particles into sizes 5-10 mm (coarse aggregates) ...

Rock mass condition assessment during tunnel excavation is a critical step for the intelligent control of tunnel boring machine (TBM). To address this and achieve automatic ...

Application of Artificial Intelligence (AI) in tunnel construction has the potential to transform the industry by improving efficiency, safety, and cost-effectiveness. This paper ...

Various theoretical and laboratory studies have been conducted on the parameters affecting the wear of the TBM disc cutter, cutter performance, and penetration rate ...

The deep integration of artificial intelligence (AI) and tunnel boring machine (TBM) has emerged as a critical research direction in intelligent tunnel construction. However, ...

A Visual Survey of Tunnel Boring Machine (TBM) Performance in Tunneling Excavation: Mainstream Direction, Brief Review and Future Prospects Applied Sciences (IF 2.5) Pub ...

"Real-Time as-Built Tunnel Product Modeling and Visualiza-tion by Tracking Tunnel Boring Machines." Montreal, International Association for Automation and Robotics in Construction, ...

Abstract Driven by the growing requirements for long-distance tunnels, autonomous steering control is a productive research to surpass the limitations of manual operation in ...

A Visual Survey of Tunnel Boring Machine (TBM) Performance in Tunneling Excavation: Mainstream Direction, Brief Review and Future Prospects.

A Visual Survey of Tunnel Boring Machine (TBM) Performance in Tunneling Excavation: Mainstream Direction, Brief Review and Future Prospects Yulin Zhang, Jian Zhou, Yingui Qiu, ...

Additionally, to address the problem that traditional tunnel boring machine (TBM) cutters cannot be automatically replaced by robots, [61] proposed a cutter feature recognition and extraction ...

Tunnel Boring Machines (TBMs) are large multi-million pound machines used to excavate underground tunnels. In order to make best use of the high-speed performance of a ...

This paper presented a novel web-based visualisation platform for a look-ahead ground imaging system on tunnel boring machines. Linked to a ground imaging system with ...

Abstract During the tunnelling process of a tunnel boring machine (TBM), accurately predicting the advance rate (AR) is highly desirable for enhancing construction ...

Background Precise positioning of tunnel boring machines (TBMs) in underground coal mines plays a fundamental role in the automated and intelligent guidance and control of fully ...

PDF | On Jul 16, 2021, Sandip Ghosh published Performance Review of Tunnel Boring Machines | Find, read and cite all the research you need on ResearchGate

This work explores the potential for predicting TBM performance using deep learning. It focuses on a 17.5-km-long tunnel excavated for the Yingsong Wa...

This paper conducts a critical literature review and conceptual analysis, aiming to elucidate the framework, characteristics, and key technologies of DT for intelligent tunnel ...

Full-face tunnel boring machine (TBM) tunnelling has unparalleled advantages over conventional drill-and-blast (D& B) techniques in terms of higher advance rates and lower risk ...

The interpretation of large amounts of geological data, precise subsurface condition forecasts, and design uncertainty reduction are all made possible by AI-powered ...
