What is Automine ® concept underground drill?

The AutoMine ® Concept Underground Drill is a fully autonomous,twin-boom development drill rigcapable of drilling without human interaction. The cabinless battery-electric drill can plan and execute the entire drilling cycle from tramming to the face,setting up for drilling,drilling the pattern and returning home to charge for the next cycle.

What is hydraulic rock drilling?

This reliable technology, which was introduced in the 1970s, employs hydraulic power, independent rotation, and separate flushing systems to drill through hard rock formations. Hydraulic rock drilling delivers superior accuracy, automation, and efficiency, making it fundamental to the operations of drill rig manufacturers worldwide.

How does a rock drill work?

The pumping unit is comprised of a 20 litre steel or aluminum tank to which a pump is attached which injects product using a regulator and needle valve. A hydraulic hose is attached to the needle valve which is mounted on the rock drill line on the drill. A solenoid switch may be attached to the drill to regulate the fl ow of product.

What is Automine® surface drilling autonomous?

AutoMine® Surface Drilling Autonomous package reduces equipment damage and lowers maintenance costsdue to less wear and tear with automated functions. Accurate and efficient rig operation minimizes the possibility of human error.

How does a drill bit work?

Rods or tubes serve as conduits for energy transfer,and the bit takes the lead in mechanically attacking the rock for successful penetration. Together,these components enable effective rock excavation. determines the force applied when the drill bit strikes the rock,a critical factor for penetration.

Why should you use hydraulic rock drills?

Versatility: Adaptable to various rock types and geological conditions,enhancing flexibility for different excavation tasks. The industry's current trends prioritize enhancing drilling speed,efficiency,and tooling for larger hole sizes,all while increasing the power of hydraulic rock drills.

Thanks to the partnership between Epiroc and Newmont Goldcorp, the world's first fully autonomous SmartROC D65 surface drill rig is now in production.

The magnetite is buried in hard rock beneath metres of looser clay-like soil and then transitional earth,
