What kind of Grease do you use for a hammer drill?

It is important to use a high-quality lithium-based grease or a grease specifically designed for power tools. These types of greases have excellent lubricating properties and can withstand the high temperatures generated during drilling operations. Can I use any grease for my SDS hammer drill?

How to grease a SDS hammer drill?

If you're wondering how to grease a SDS hammer drill, you're in the right place. Greasing your SDS hammer drill is important for maintaining its performance and extending its lifespan. To grease your drill, you'll need to locate the grease fitting on the drill's body. This fitting is typically marked with a symbol that resembles a grease gun.

How do you Grease a drill?

Locate the grease fitting on the drill. This is usually a small nipple-like protrusion where the grease will be applied. Clean the grease fitting and the surrounding area to remove any dirt or debris. This will ensure that the grease can be applied effectively. Next, select the appropriate type of grease for your drill.

How do you Grease a drill chuck?

Clean the area around the grease fitting with a rag or paper towel to ensure there is no dirt or debris. Then, using your small brush or applicator, apply a small amount of grease to the fitting. Be careful not to over-grease, as this can cause build-up and make your drill less effective.

How often should I Grease my SDS hammer drill?

The frequency of greasing your SDS hammer drill will depend on how often you use it. As a general rule of thumb, it is recommended to grease the drill every 25-50 hours of use or at least once a year if the drill is not used frequently. What type of grease should I use for my SDS hammer drill?

How do you use a grease gun?

Use a grease gun to apply the grease to the fitting. Insert the nozzle of the grease gun into the fitting and squeeze the trigger to release the grease. Be careful not to over-grease, as this can cause excess grease to leak out and make a mess.
