What is a water well hammer?

Water well drilling demands precision, efficiency, and the right tools to ensure successful outcomes. One critical component in this process is the Down-the-Hole (DTH) hammer, which plays a pivotal role in penetrating various ground types and reaching desired well depths.

What are the different types of drilling rigs offered by Simco?

With a focus on the specific processes involved in geothermal drilling, geotechnical drilling, and water well drilling, these drilling videos enable you to see the differences between the various drilling rigs offered by SIMCO. A variety of geothermal drilling videos allow you to view Air Rotary DTH Hammer and Mud Rotary drilling.

What is DTH hammer drilling?

DTH hammer drilling is a widely utilized technique in the drilling industry, known for its effectiveness in breaking down rock and soil with minimal energy loss. Unlike rotary drilling, where the drill bit is rotated from the surface, DTH drilling involves a hammer that operates directly behind the drill bit.

How do you lubricate a drill hammer?

You can monitor the oil usage by using an inline hammer lubricator or you can simply pour the oil down the drill string as you put on a new joint. I have seen some homemade oilers in the field as well. Honestly, it doesn't matter how you deliver the oil to the hammer. Just make sure you are lubricating the hammer.

What types of drilling rigs are available?

The drilling videos featured here on our website showcase the capabilities of various types of drilling rigs, including water well drilling, auger drilling, core drilling, and more.

Should a driller switch from Rotary to DTH drilling?

It's important for a driller transitioning from rotary drilling to DTH drilling to know that they need to slow down the rotation speed on the rig. Faster rotation does not equate to increased penetration rates. The DTH hammer method is intended to crush new rock with every index of the rotating bit face.
