

What are the reasons for the scrapping of core drilling rigs

Is offshore rig scrapping at its lowest level in years?

Westwood Global Energy, an energy market research and consultancy firm, has revealed that offshore rig scrapping is at its lowest level in years, as the offshore drilling market's recovery intensifies. As a result, cold-stacked rigs are being increasingly reactivated for new assignments amid growing demand and elevated day rates.

How many rigs have been removed from the rig market?

According to Westwood's analysis, during the deepest period of the rig market downturn from 2014 to 2018, there was a yearly average of 43 rigs (jack-ups, semi-submersibles and drillships) permanently removed from the active fleet, mostly through scrapping or conversion for non-drilling purposes.

Are rigs being scrapped at their lowest level in years?

Research from Westwood Global Energy Group shows cases of units being scrapped are at their lowest level in years with the market red hot. Demand for rigs has grown steadily in the last couple of years, causing day rates for leasing vessels to follow suit.

How does a core drilling rig work?

Depending on the size of the hole, most situations require the drilling rig to be attached to the ground or surface with an anchor, bolt, or vacuum seal to keep the rig stabilized. Because core drilling requires substantial speed and force to get through concrete, a lot of heat is generated during the drilling process.

Are offshore drilling rigs getting more utilised?

As another rig market upcycle, which took hold in the latter half of 2021, is currently ongoing, higher demand and utilisation are now being recorded in all three offshore drilling rig segments.
