What are drill sleeves?

The sizing is typically specified in terms of the outer diameter (OD) and the inner diameter (ID). The primary purpose of drill sleeves is to adapt drills with one shank size to fit into chucks or spindles with different size capacities. They ensure compatibility between drills and various drilling equipment, allowing for flexibility in tool usage.

Why do drill sleeves come in different sizes?

Drill sleeves come in various sizes to accommodate different shank diameters and chuck sizes. The sizing is typically specified in terms of the outer diameter (OD) and the inner diameter (ID). The primary purpose of drill sleeves is to adapt drills with one shank size to fit into chucks or spindles with different size capacities.

What makes a summit Drill sleeve a good choice?

Material: SUMMIT Drill sleeves are from high-quality alloy steel to provide strength and durability.
Hardening: Drill sleeves undergo heat treatment or hardening processes to enhance their wear resistance, ensuring a longer lifespan.

Do drill sleeves reduce or expand Chuck size?

Drill sleeves can either reduce or expand the shank size. Reduction sleeves are used when a smaller shank needs to fit into a larger chuck, while expansion sleeves are used for the opposite scenario. **Material:** SUMMIT Drill sleeves are from high-quality alloy steel to provide strength and durability.
