

Where should the air leg of the air leg rock drill be placed to ensure the correct position

What is air leg Rock Drill?

Air leg rock drill is a tool work in quarrying, construction and mining, which uses compressed air to drive rock drilling tools for rock drilling operations. This type of rock drill machine usually consists of a compressed air source, the rock drill body and the drilling bit.

How do you drill a deep hole in a rock drill?

When drilling deep holes, must use different lengths drill rods of different lengths, and use short drill rods at the beginning. The air leg rock drill consists of two main parts, a jack hammer head and an air leg. The jack hammer head consists of a silencer, a motor, a water chamber, a motor control valve, and an air leg control valve.

What is bd-yt24 air leg Rock Drill?

Technology. It is an efficient, energy saving rock drill. The BD-YT24 Air Leg rock drill has lower noise, higher durability, faster speeds rate than other comparable drills. Features Include Centralised operating system, flexible startup, combination of pneumatics and water, ease of use and straightforward maintenance

What is bd-yt29a air leg Rock Drill?

Technology. It is an efficient, energy saving rock drill. The BD-YT29A Air Leg rock drill has lower noise, higher durability, faster speeds rate than other comparable drills. Features Include Centralised operating system, flexible startup, combination of pneumatics and water, ease of use and straightforward maintenance

How do you use a rock drill?

Operation Using the rock drill for the first time When the rock drill arrives from the factory, the inside of the tool is coated with heavy oil to prevent corrosion. After unpacking and installing the tool, pour a small amount of lubrication oil into the air connection and operate the tool on partial throttle to clean the interior. 4.

What is a rock drill machine?

This type of rock drill machine usually consists of a compressed air source, the rock drill body and the drilling bit. During operation, compressed air is transported into the main body of the rock drill through pipelines.
